Burndown Chart

How to read this chart

Date	Issue	Event Type	Event Detail	Inc.	Dec.	Remaining
27/Aug/26 9:25 PM	SPSRLV-10	Sprint start		3		
	SPSRLV-11			5		
	SPSRLV-6			5		
	SPSRLV-7			3		
	SPSRLV-8			3		
	SPSRLV-9			5		
	Total					24
27/Aug/26 9:33 PM	SPSRLV-6	Burndown	Issue completed		5	19
	SPSRLV-8	Burndown	Issue completed		3	16
	SPSRLV-7	Burndown	Issue completed		3	13
	SPSRLV-9	Burndown	Issue completed		5	8
	SPSRLV-10	Burndown	Issue completed		3	5
	SPSRLV-11	Burndown	Issue completed		5	0
27/Aug/26 9:34 PM	SPSRLV-10	Sprint ended by Sharvanee Naru				0
	SPSRLV-11					0
	SPSRLV-6					0
	SPSRLV-7					0
	SPSRLV-8					0
	SPSRLV-9					0
	Total					0

Epic	User Story	As a	I want to	So that
Epic 1: Parking Reservation & Bay Management	SPSRLV-4: Reserve Parking Bay	Driver	reserve an available parking bay	I can secure a parking space before arriving
Epic 1: Parking Reservation & Bay Management	SPSRLV-5: View Parking Bay Status	Driver	view the availability/status of parking bays	I can choose an available parking space
Epic 2: Vehicle Entry & License Validation	SPSRLV-6: Validate Vehicle License Plate	Parking Administrator	validate a vehicle's license plate	I can ensure that only authorized vehicles enter
Epic 2: Vehicle Entry & License Validation	SPSRLV-7: Scan License Plate	Parking Attendant	scan a vehicle's license plate	I can identify the vehicle quickly at entry
Epic 3: Parking Billing & Overstay Monitoring	SPSRLV-8: Record Vehicle Entry	Parking Attendant	record the vehicle's entry time	I can track parking duration accurately
Epic 3: Parking Billing & Overstay Monitoring	SPSRLV-9: Calculate Parking Fee	Parking System	calculate the parking fee based on duration	I can charge the correct parking amount

SOFTWARE ENGINEERING LAB -2

Epic 3: Parking Billing & Overstay Monitoring	SPSRLV-10: Record Vehicle Exit	Parking Attendant	record the vehicle's exit time	I can determine the total parking duration
Epic 3: Parking Billing & Overstay Monitoring	SPSRLV-11: Flag Unauthorized Overstay	Parking Administrator	identify vehicles exceeding their permitted parking time	I can take appropriate action against unauthorized overstays

1. Did your estimations meet the real efforts?
Yes, my estimations adequately reflect the real efforts. The number of story points was estimated with respect to Fibonacci sequence and depended on the complexity, effort and uncertainty. Stories with high complexity such as license validation and parking fee calculation got more story points while simple tasks such as scanning and recording of the vehicle information got fewer story points. As we simulated the sprint, then story points show only estimated efforts.

2. Is your backlog well-prioritized?
Yes, my backlog is well-prioritized. The priority of the stories depends on the user impact and importance. Prioritization of stories with high priority is higher than low priority as they are key to the parking process: reserving the bay, validating the vehicle, calculating fees, processing of unauthorized overstays. Low priority stories assist in these functions.

3. How did your simulated sprint align with your plan?
The simulation of sprint matched my planning. The stories selected were passed through the Jira workflow: To Do → In Progress → Done, all planned stories were completed during the sprint. The sprint was created and had defined period when the work was done in accordance with the priorities.

4. What insights did the burndown chart give you about your team's capacity?
Burndown chart provided me an insight into the team's capacity to complete the planned workload of sprint within the sprint period. Number of story points remaining decreased and eventually became equal to zero, which means that all planned work was accomplished.
